

Rexroth IndraMotion for Packaging

Flexible, open and intelligent

Rexroth IndraMotion for Packaging – the intelligent industry solution from the Automation House

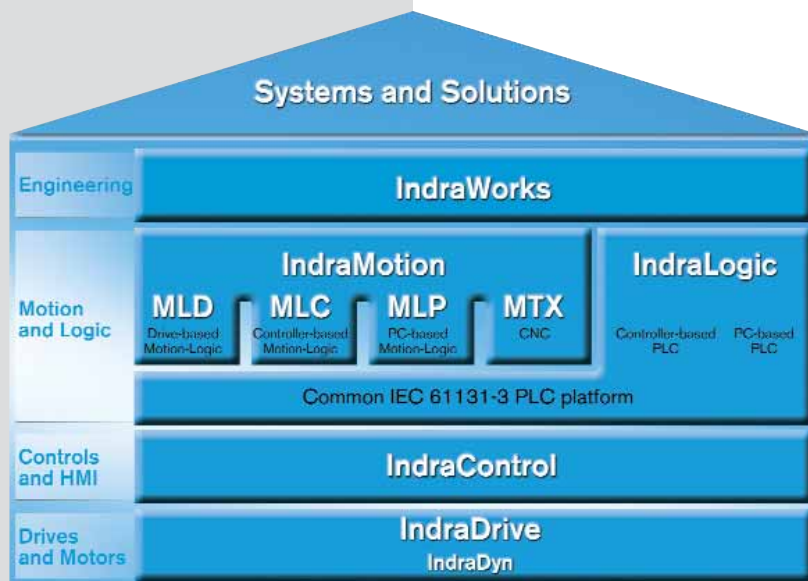

IndraMotion for Packaging is a well-engineered industry solution from Rexroth's Automation House family of products. This modular package includes all of the elements you need to successfully deploy your automation designs. The broad portfolio of perfectly matched controllers, HMI devices and drives makes your automation projects virtually as easy as child's play.

The automation solutions used on today's production systems are becoming increasingly sophisticated. Users need higher productivity, greater flexibility, simpler integration and open designs which facilitate system expansion at a later date, and of course they want all of that at lower cost. It takes a partner with in-depth expertise and knowledge of the industry to provide complete, seamless solutions. Customers expect to get a full range of applications with motion control and PLC functionality, which cover everything from the drives to visualization and the HMI.

To give our customers exactly what they need, we continue to drive the development of our systems which already have an enviable reputation around the world.

The result of this development activity is our innovative Automation House, which is a modular family of products which includes all of the components you need for your flexible, intelligent automation solutions. Our modular kits are complete, scalable and future-proof.

- **IndraDrive and IndraDyn**
the drive system platform
- **IndraControl**
the control and visualization platform
- **IndraMotion**
the system software with integrated motion control
- **IndraLogic**
the standardized PLC platform
- **IndraWorks**
the fully-featured engineering framework for all systems

IndraMotion for Packaging is a complete, intelligent solution for the food and packaging industry, and it is based on Rexroth's Automation House. It includes the full range of system components which you need to implement your automation solutions. You get everything from drives and controllers to a powerful engineering framework and a user-friendly HMI.

The market for food and packing machinery is more differentiated and complex than ever, and machine manufacturers are expected to deliver more and more performance and features. IndraMotion for Packaging is the right automation tool for machine manufacturers who are prepared to face up to the challenges. It is the ideal choice for handling solids or liquids in production and for packaging applications in the pharmaceutical and food industries.

IndraMotion for Packaging bundles together Rexroth's extensive experience in providing complete, standardized solutions for all segments of the food and packaging industry:

- food
- beverages
- confectionery
- pharmaceuticals
- cosmetics
- tobacco

These solutions offer a whole range of advantages in any application, from individual machines to entire production lines:

- form and fill systems
- fill and seal machines
- thermoforming, fill and seal systems
- tubular bag machines
- labeling machines
- intelligent sorting machines
- multipacking machines
- cartoners
- pick-and-place robots
- palletizers

**IndraMotion for Packaging –
the open and scalable complete solution**

A competitive advantage for the end user

Global competition presents enormous challenges to manufacturers who produce food, tobacco, beverages, cosmetics or pharmaceuticals. The list of challenges includes low prices, top quality and high flexibility. Producers try to juggle all of these demands by increasing productivity and driving costs down.

The motto is: zero rejects, minimal idle time and fast cycle times throughout the entire process from production right through to final packaging.

IndraMotion for Packaging will help you meet these challenges.

We know, because our systems show what they can do every day in thousands of machines and systems around the world.

Increase your productivity:

- electronic cams
- high-precision drive synchronization solutions
- preventive diagnostics and maintenance
- safety on board to minimize idle time

Get added flexibility:

- faster changeover using electronic synchronization
- standardized communications interfaces
- open programming standards (IEC 61131-3, PLCopen, OMAC)
- Rexroth's cross-technology drive & control expertise

Drive down cost:

- scalable motion control solutions
- process-specific function libraries and technology functions
- fully-featured systems software boosts engineering efficiency
- safety on board reduces component and certification costs

Expect the best response when you need a service call:

- modular system design facilitates simple device swap
- plug-and-play reduces device swap time
- direct access to system using remote diagnostics
- holistic service expertise including 3rd party equipment

Flexible automation solutions on standardized platforms

Today, open system architecture is the key to future-proofing your product automation solutions and protecting your investment. These systems offer standardized communications interfaces, open programming standards and modular design. Standardized interfaces enhance device technology and communication and simplify engineering to give you the flexibility you need when you develop your machine and controller configurations.

IndraMotion for Packaging makes uncompromising use of recognized worldwide standards and unlock the door to complete, open system solutions which are based on standardized hardware and software platforms. Drive, controller and PC-based motion logic control solutions give customers the business and engineering performance which they expect from best-in-class architecture.

IndraMotion for Packaging is ideal both as a stand-alone system or a multi-control solution in “total line automation” applications. The open, scalable system solution delivers all of the benefits of standardization and modular design on production systems, starting with the production process and continuing all the way through to the primary, secondary and final packaging stages.

The standardized user interface complies with all current PLC standards

Open communications based on support for all worldwide industry standards

Future-proof basic software for operating systems, middleware and applications

System architecture designed for the long term and simple integration of new technologies

Scalable hardware architecture

IndraMotion MLD
economic solutions
for simple applications

IndraMotion MLC
standard mid-range
to high end solution

IndraMotion MLP
highly-integrated
mid-range solution

Complete automation system for drive-based, controller-based and PC-based applications

Open communications standards and standardized IEC 61131-3 compliant PLC platform

Controllers, drives, I/O and safety devices link into to the end-to-end SERCOS III system bus

Standardized IndraWorks engineering tool for motion, logic, HMI and drives

Industry-specific function libraries and technology functions

Standardized system software

Rexroth's IndraMotion for Packaging solution consolidates years of automation know-how in a standardized hardware and software platform. The solution is built around the convergence of highly advanced motion control and standardized PLC technology to create complete, integrated solutions. All versions of IndraMotion for Packaging use the same embedded PLC programming and runtime system kernel.

In order to facilitate integration of your state-of-the-art mechatronic solutions, IndraMotion for Packaging offers function libraries and technologies which complement the basic motion logic functionality.

- function libraries containing basic IEC and PLCopen function modules
- technology functions offering process-specific functions for print mark control, tension control, temperature control and much more.
- user libraries containing function modules which integrate customer-specific engineering know-how

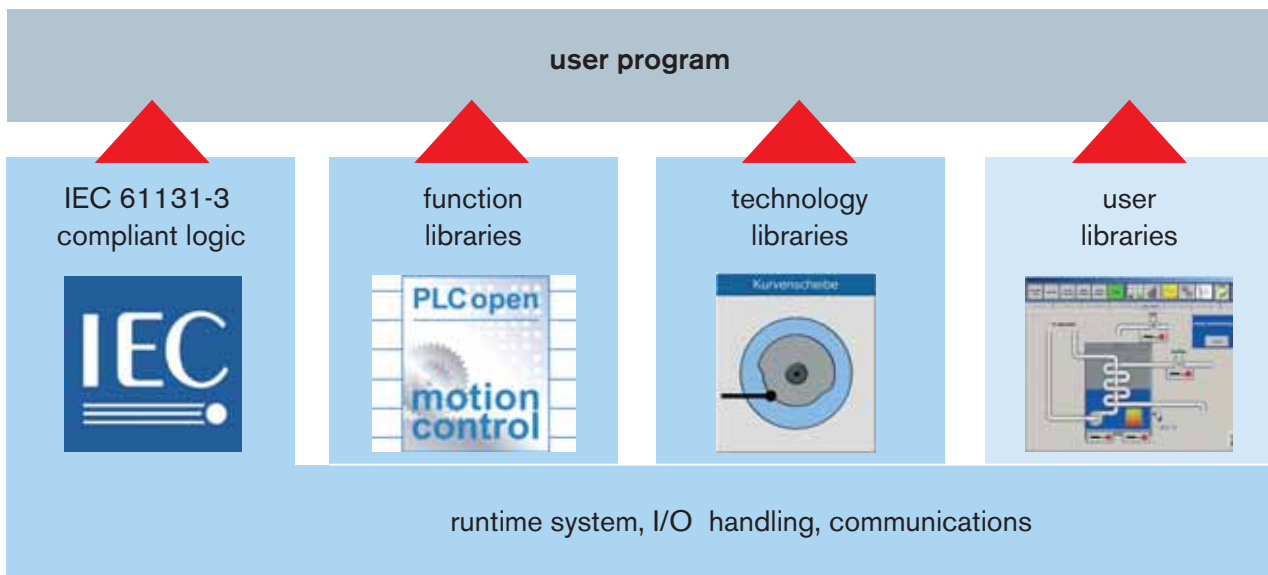

The result

A user program which was created using any combination of existing and new function libraries and technology functions.

The advantages

Efficient machine programming reduces cost and saves time. Your programs are more clearly structured, and this added transparency facilitates re-use.

Standardized software architecture with no hardware dependencies

Standardized engineering environment with integrated technology functions

Our ready-to-use function libraries and pre-defined technology functions give you the tools which make it very easy for you to develop large, sophisticated applications. You then use the IndraWorks engineering framework to add these functions to your applications program and speed up configuration and parameterization of the entire system

The advantages

- quick reaction to market and customer requirements
- Ready-to-use function libraries and pre-defined technology functions help you implement complex processes
- efficient modifications for new machine and system designs
- simplified deployment of modular machine control designs

The portfolio

- print mark control
- handling
- FlexProfile
- crank kinematics
- controller-based and drive-based electronic cam
- cam group
- no gap - no seal
- no product - no bag
- measuring wheel
- touch probe function
- on-the-fly machining
- PID controller
- preventive diagnostics
- cross cutter
- register control
- sag control
- smart belt infeed
- temperature control
- adjusting
- winder
- tension control

Streamlined engineering helps reduce time to market

Rexroth IndraWorks gives you all of the engineering tools you need in a single engineering environment, and you can use it for all of our automation systems. The fully-featured framework guides you through every step of the planning and programming process right through to visualization and diagnostics.

The big picture

IndraWorks provides an easy way of grouping your controllers and HMI devices. It does not matter whether you are working on a distributed system with controller on a network or a complex machine with centralized control and distributed HMI units. When you have a complex set of interfaces, IndraWorks makes sure that you always have the big picture.

Distributed Engineering

To get through the startup phase quicker, IndraWorks allows a number of engineers to work in parallel on various subsystems in an automation project.

With Rexroth IndraWorks, you use a single software package for all of your engineering work on any industry application.

Customized configuration

System diagrams, maintenance notes, online documentation and electronic handbooks can easily be added to the standard user interface. ActiveX controls provide an elegant way of adding complex visualization features.

Simple process monitoring

Open communications interfaces facilitate data access right down to the drive parameter level. All of the relevant data reflects the latest process status.

Total line automation with Rexroth – expertise in every dimension

Whether you are producing or packaging food, beverages, tobacco, pharmaceuticals or cosmetics, the performance capabilities of the automation solution play a major role when you join up the individual machines and process steps to create highly flexible production lines.

IndraMotion for Packaging gives you all of the advantages of a fully modular, open automation solution, starting with the production process and continuing right up to primary, secondary and final packaging. Multi-tasking modes including single-axis positioning, multi-axis synchronization and coordinated path movement provide the ideal basis for machine automation in any application.

Rexroth automation solutions – Milestones in packaging technology

The name Rexroth stands for innovation and future-proof solutions in the world of packaging machine engineering. Our ongoing development activity continues to drive the evolution of packaging machinery:

- Generation II – intelligent servo drives and realtime communications via the SERCOS 2
- Generation III – electronic line shaft and PC-based controller architecture with up to 40 servo axes
- GenNext – Rexroth multi-technology solutions for maximum distributed intelligence

Generation III

- Machine drive with electronic shaft
- excellent flexibility and automated changeover
 - short lead times and low operating costs
 - drastic reduction in mechanical elements

Generation II

Mechanical hybrid machines with some servo drives

- greater flexibility, easier changeover
- more flexible machine design
- some reduction in mechanical elements

Generation I

Machine drive using vertical timing shaft

- mechanical cams, gears and chains
- inflexible
- high cost maintenance
