

2/2-Way; G 3/8" – 1/2"; PN 0.5 – 10.0 bar

Advantages/Benefits

- ▶ **Low power consumption, no relay necessary when used on a PLC**
- ▶ **Medium is separated from the actuator system**
- ▶ **Compact size**
- ▶ **Low weight**
- ▶ **Radially interchangeable**
- ▶ **Easy Flow Control System Module**

Design/Function

Type 6228 is a servo-assisted 2/2-way plastic solenoid valve with a separating servo diaphragm. It is based on a modular concept with push-over coil and standard cable plug. The valve is normally closed by spring force. Energized, the solenoid opens the pilot valve first. Then the medium pressure opens the valve against the pressure drop above the diaphragm. The valve is radially interchangeable.

Optimised point-to-point connection between Burkert-Sensors and Actuators

Ability of communication with conventional controlling or Fieldbus connections

Applications

Fluids

- Neutral fluids, which do not affect plastic material, e.g. pressurized air, water, hydraulic oils, oils or fat without additives

Applications

- General purpose applications
- Water and sewage treatment
- Irrigation systems
- Public hygiene
- Medical service
