

Tegwave

Individual and smart concentration measurement

Your benefits in brief

- Time saving of up to 180 hours per year and per measuring point
- Robust measurement and long-term stability
- Maintenance-free, no moving parts
- Integrated temperature compensation
- Precise factory calibration ensures highest accuracy
- In-line measurement directly in the pipe

Verifiable measurement of liquids

Demonstrate environmental awareness in your use of industrial cleaning agents while reliably and verifiably fulfilling the requirements of complete documentation.

Simple, fast and cost-saving

Teqwave beats titration

Get on the cost-saving offensive with Teqwave!

Until now, concentrations in cleaning fluids were measured using the complex process of titration. But now, with the innovative Teqwave measuring system, you can measure liquid concentrations in-line and monitor them directly in the tank or in the pipeline.

Compare for yourself

Titration

Once a day. This incurs costs of approx. 50 euros per day.

Current cost level

18000 euros per year (360 days)

Teqwave

One-time investment
approx. 5500 euros

Amortisation
less than four months

The solution: Teqwave

When it comes to cleaning processes, industries are now faced with the challenge of coordinating their economically optimised solutions with, among other things, environmental protection. With the innovative Teqwave measuring system, you no longer need to perform complex and time-consuming titration procedures: in contrast to orthodox measuring techniques involving the taking of samples during ongoing production – which, in the event of a negative test result, can result in the loss and wastage of an entire batch – Teqwave performs its measurements in-line and in real time. This allows production to be readjusted or regulated at any time, thus minimising losses. Where required, Teqwave supplies integrated documentation of the cleaning process in accordance with your customer's

quality control requirements. Teqwave can be incorporated in existing pipes without requiring any conversion procedures.

One for all

It is all down to the app solution: just choose from the many concentration apps for cleaning agents available from our database, and the application range of the Teqwave can be effortlessly expanded.

Just get in touch with us and we will be happy to advise you on how you can save costs by using Teqwave in your production.
