Memory Map protocol

Memory Map protocol is similar to IBM 3764R communication protocol. The MT8000 reserves 512 words of Data memory for use with this protocol. The MT8000 must update the values in these words. The MT8000 uses the words to display data and control parts status on its screen. When touch actions are taken, data is sent to the other once, and then update the memory in it. The MT8000 is always responsible for updating the Data memory.

HMI Setting:

Parameters	Recommend	Option	Notes
PLC type	Memory Map		
Com port	RS232	RS232, RS485 4W, 2W	RS232 default
Baud rate	115200	9600~115200

Device address:

Bit/Word	Device Type	Format	Range	Memo
B	MB	ddd(h)	ddd:0~9999 (h): 0~F	
W	MW	ddd	ddd:0~9999	

The MB and MW are using same area to store data.

MW 0 = MB 000000 ~ MB 0000F

MW 1 = MB 000100 ~ MB 0001F

When using Q02U driver, HMI needs 10 seconds to initial the PLC Q02U driver. Before finishing initial, we suggest users don't wrire data to PLC, or it could cause the "PLC no response"； and if the wiring diagram or the data are incorrect, it could cause PLC locked. If the PLC locked, users have to restart PLC or reinstall PLC module.

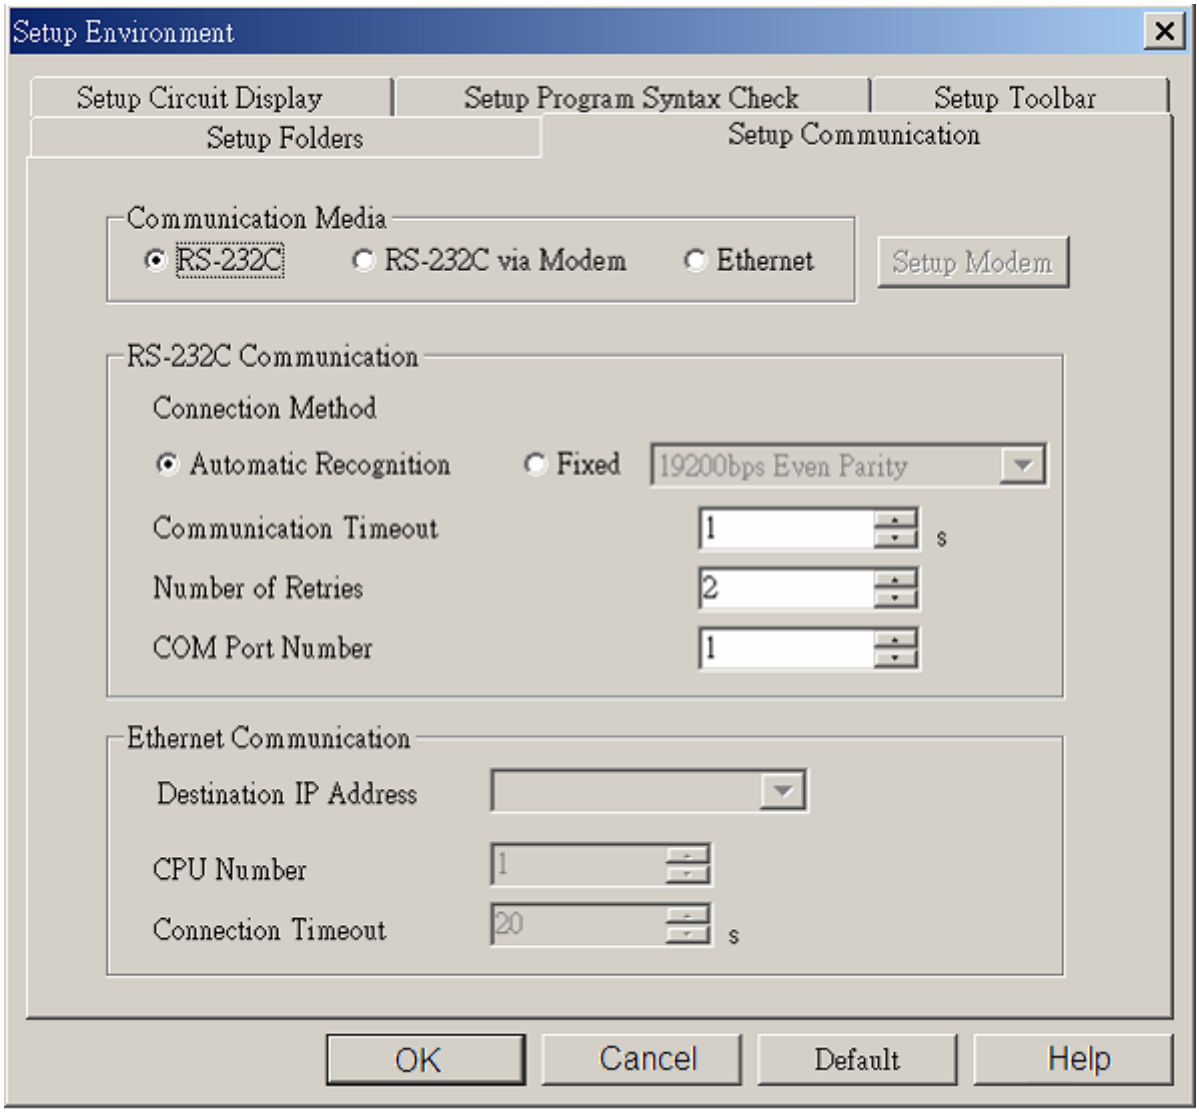
How to get the WideField communication setting

If you want get the WideField communication setting, select [Tool]->[Set Environment] default is Automatic. Using the Automatic Recognition, Wide Field software will connect the Current PLC and get the PLC communication setting. If you have know the PLC communication configuration, you alse can select the Fixed mode ,It will connect the PLC quickly.



P.S Because use Personal computer link, when you connecting to PLC it will delay about 20sec for test communication.
